Work Authorization: No Visa Sponsorship Needed • Open to Remote • Hybrid • On-site • Open to Relocation

PROFESSIONAL SUMMARY

Results-driven Senior QA Automation Engineer and SDET with 8+ years of experience designing and delivering enterprise-grade test automation frameworks and CI/CD-integrated regression suites for healthcare and financial systems. Expert in Selenium WebDriver (C# and Java), Playwright (TypeScript and Python), TestNG, JUnit, NUnit, Cucumber, and SpecFlow (BDD/Gherkin). Skilled in building scalable Page Object Model (POM) and hybrid frameworks, and deploying distributed test infrastructure on AWS EC2 with Selenium Grid and Playwright. Proven track record delivering release-ready automation pipelines in Azure DevOps, Jenkins, and GitHub Actions — proactively identifying coverage gaps, mentoring junior engineers, and driving quality across the full SDLC. Deep domain expertise in Healthcare IT (Epic EHR, FHIR, HL7, MEDITECH) and Financial Services. Experienced collaborator in Agile/Scrum environments with strong communication skills across development, product, and business stakeholder teams.

CORE COMPETENCIES

Test Automation (Selenium, Playwright) • Page Object Model (POM) • BDD / Cucumber / SpecFlow / Gherkin • CI/CD Pipelines

C# • Java • TypeScript • Python • SQL • JavaScript • VB.NET • REST API Testing • Azure DevOps

AWS EC2 • Jenkins • GitHub Actions • Docker • Jira • TestRail • Agile / Scrum • SDLC / STLC

Epic EHR • FHIR • HL7 • MEDITECH • GitHub Copilot • AI-Augmented Testing • WinAppDriver • Appium

TECHNICAL SKILLS

Test Automation Selenium WebDriver, Selenium Grid, Playwright (TypeScript/Python), Appium, WinAppDriver, FlaUI, REST Assured, Postman

Languages C#, Java, TypeScript, JavaScript, Python, SQL, VB.NET

Test Frameworks TestNG, JUnit, NUnit, Playwright Test, Cucumber (BDD), SpecFlow (Gherkin), Page Object Model (POM), Hybrid Frameworks

CI/CD & DevOps Azure DevOps (ADO), Jenkins, Git, GitHub, Maven, GitHub Actions

Cloud & Infrastructure AWS EC2 (instance provisioning, environment configuration, Selenium Grid & Playwright distributed test execution)

Test & Defect Mgmt Jira, Azure DevOps Test Plans, HP Quality Center, TestRail

API & Database REST API Testing, REST Assured, Postman, SQL, Oracle, MySQL, JDBC

Methodologies Agile, Scrum, BDD, TDD, Regression, Smoke, Functional, Integration, UAT, Manual Testing

Tools & Platforms IntelliJ IDEA, Visual Studio, Eclipse, Android Studio, Docker, GitHub Copilot, Linux/Unix

Domain Knowledge Healthcare (MEDITECH Expanse/MAGIC, Epic EHR, FHIR, HL7), Retail Banking, Financial Applications

PROFESSIONAL EXPERIENCE

Senior SDET / SDET

July 2023 – Present

HCA Healthcare • Nashville, TN

- **Selenium + C# Automation:** Architected and maintained enterprise Selenium WebDriver + C# test automation suites using SpecFlow (BDD/Gherkin), NUnit, and Page Object Model (POM), covering functional, regression, smoke, and end-to-end scenarios for clinical dashboards and financial portals; significantly reduced manual regression effort. Authored supplemental Java utility libraries shared across QA teams.
- **Framework Engineering:** Engineered hybrid automation frameworks in C# and TypeScript with configuration-driven design (XML/JSON), centralized logging, screenshot-on-failure, and parallel execution; defined test strategies and estimates aligned with Agile delivery and integrated directly into Azure DevOps CI/CD pipelines. Evaluated and piloted Playwright (TypeScript) as a next-generation Selenium replacement on select regression suites.

- **Playwright Automation (TypeScript & Python):** Developed and maintained Playwright test suites in TypeScript and Python targeting clinical portal and patient-facing web applications; leveraged Playwright's auto-wait, trace viewer, and parallel execution to achieve faster, more reliable end-to-end coverage; integrated Playwright Test runner into Azure DevOps pipelines with HTML reporting and screenshot capture on failure.
- **AWS EC2 Cloud Infrastructure:** Provisioned and configured AWS EC2 instances to host distributed Selenium Grid nodes and Playwright test workers, enabling scalable parallel test execution across browsers and environments; managed AMI selection, security groups, and instance lifecycle (start/stop/terminate) to optimize cloud spend; coordinated EC2 environments with Azure DevOps pipeline triggers for on-demand and nightly regression runs.
- **Azure DevOps & Jenkins CI/CD:** Configured and maintained CI/CD pipelines in Azure DevOps, Jenkins, and GitHub Actions — scheduling nightly regression runs, publishing HTML test reports, enforcing automated quality gates on pull requests, and coordinating release testing activities across multiple environments.
- **Jira Defect & Test Management:** Logged, triaged, and tracked defects end-to-end in Jira and Azure DevOps Test Plans; proactively identified risks and gaps in test coverage; maintained requirement traceability matrices and collaborated cross-functionally with developers, Product Owners, and business stakeholders across Agile/Scrum sprints to drive timely root cause resolution.
- **REST API Testing:** Validated REST API endpoints using Postman and REST Assured; designed test suites covering CRUD operations, authentication flows, schema validation, and response time assertions; authored Python scripts for data-driven test payload generation and backend verification via SQL against Oracle and SQL Server.
- **Epic EHR & Healthcare Integration:** Integrated with Epic Electronic Health Record (EHR) systems, validating interoperability workflows and data exchange standards including FHIR and HL7; designed and executed test scenarios covering FHIR API endpoints, HL7 message parsing, and end-to-end clinical data flows between Epic and downstream healthcare systems.
- **Manual & UAT Testing:** Performed manual functional, integration, and UAT testing for end-to-end patient discharge workflows including provider orders, nursing documentation, medication reconciliation, and billing/charge-capture; produced compliance evidence packages for hospital go-lives.
- **Desktop Automation:** Developed Windows desktop UI automation for clinical and back-office applications using WinAppDriver and FlaUI in C#; automated data entry, form validation, and report generation workflows, eliminating repetitive manual processes.
- **Leadership & Mentoring:** Conducted peer code reviews and mentored junior SDET engineers on Selenium, Playwright, TypeScript, and Python best practices; leveraged GitHub Copilot and generative AI tools to accelerate test script authoring, refactor legacy automation, and streamline QA documentation.
- **AI/ML & Data Pipeline Testing:** Applied AI/ML model validation principles and tested data pipelines underpinning machine learning workflows; verified data integrity, transformation accuracy, and pipeline outputs to ensure reliable model training inputs and consistent end-to-end data flow across healthcare analytics systems.

Automation Test Analyst II

April 2021 – July 2023

Servus Credit Union • Edmonton, AB, Canada

- **Selenium + C# Test Suites:** Designed and maintained automated regression suites for web and desktop financial applications using Selenium WebDriver + C#, SpecFlow (BDD/Gherkin), NUnit, and Page Object Model — covering financial transaction flows, account management, and reporting modules. Introduced Playwright (TypeScript) as a pilot for new browser-based test scenarios, validating faster execution and improved reliability over legacy Selenium suites.
- **Playwright + TypeScript Automation:** Developed and maintained Playwright test suites in TypeScript targeting online banking portals and customer-facing financial web applications; leveraged Playwright's auto-wait, cross-browser execution (Chromium, Firefox, WebKit), trace viewer, and Playwright Test runner for parallel execution; integrated suites into Azure DevOps CI/CD pipelines with HTML reporting and screenshot capture on failure — achieving measurable reduction in regression cycle time.
- **Azure DevOps CI/CD:** Contributed to CI/CD pipeline improvements in Azure DevOps and GitHub Actions — configuring test agents, scheduling nightly regression runs, publishing HTML test reports, and coordinating release testing to ensure quality readiness for production deployments.
- **Desktop Automation:** Automated core banking Windows desktop applications using WinAppDriver and FlaUI in C#; created stable, reusable selectors and handled dynamic UI controls in legacy financial interfaces.

- **Jira & Test Management:** Managed test cases, sprint defects, and QA metrics in Jira; defined test strategies, plans, and estimates aligned with Agile delivery; proactively identified risks and gaps in test coverage across functional, regression, and integration scenarios per sprint.
- **SQL Database Validation:** Performed SQL-based backend validation against Oracle and SQL Server for reconciliation checks, test data setup, and teardown during automated and manual testing cycles.
- **Legacy Migration:** Converted manual test cases and legacy UFT/QTP scripts into maintainable C# Selenium assets and Python-based data validation scripts, expanding automated coverage and cutting regression cycle time.
- **Knowledge Transfer:** Cross-trained QA teammates on Selenium + C# frameworks, SpecFlow BDD practices, WinAppDriver desktop testing, and Playwright TypeScript fundamentals.

QA Automation Engineer

July 2017 – April 2021

Selenium Master LLC • Columbia, MD, USA

- **Selenium + Java Frameworks:** Developed, enhanced, executed, and debugged Page Object Model (POM)-based automation frameworks in Java with Selenium WebDriver, TestNG, JUnit, and Cucumber (BDD/Gherkin); designed and maintained test strategies covering smoke, functional, regression, cross-browser, and end-to-end test suites for web applications.
- **REST API Automation:** Automated REST API validation using REST Assured (Java); designed test suites for CRUD operations, authentication, schema validation, and response time assertions; performed backend verification via JDBC and SQL queries.
- **Jenkins & Maven CI/CD:** Integrated automation suites into Jenkins CI/CD pipelines with Maven and GitHub Actions; executed data-driven, cross-browser, and parallel tests via Selenium Grid and TestNG parallel suites — improving release feedback speed and ensuring quality readiness for production deployments.
- **Mobile Test Automation:** Developed mobile automation scripts for Android and iOS using Appium + Java; built reusable mobile Page Objects and integrated suites into Jenkins CI pipelines.
- **Jira & Test Documentation:** Logged and tracked defects in Jira and HP Quality Center; maintained test plans, traceability matrices, and QA metrics across multiple concurrent Agile sprint releases.
- **Manual Testing:** Executed manual functional, regression, and integration test cases in Agile/Scrum environments; participated in sprint ceremonies — backlog grooming, sprint planning, standups, and retrospectives.

EDUCATION

Master of Science

University of Camerino, Italy

Bachelor of Science

Xinjiang Normal University, China

VOLUNTEER

Second Harvest Food Bank

2025 – Present

- Sorted and packed donated food for community distribution.
- Assisted with food box preparation and warehouse operations.
- Worked with volunteer teams to support local families facing food insecurity.
- Contributed to community outreach and hunger-relief initiatives.
