

ADAM YARKANT

QA Automation Engineer | SDET | Selenium • Playwright • Java • C# • TypeScript • Python

Nashville, TN, USA • adam.yarkan@gmail.com • 629-261-5709 • linkedin.com/in/adamyarkant

PROFESSIONAL SUMMARY

Results-driven QA Automation Engineer and SDET with 8+ years of experience designing and delivering enterprise-grade test automation frameworks and CI/CD-integrated regression suites for healthcare and financial systems. Expert in Selenium WebDriver (C# and Java), Playwright (TypeScript and Python), TestNG, JUnit, NUnit, Cucumber, SpecFlow (BDD/Gherkin), and Page Object Model (POM) frameworks. Proficient in TypeScript, Python, C#, and Java for scalable, maintainable test automation. Proven track record building release-ready automation pipelines in Azure DevOps, Jenkins, and GitHub Actions — proactively identifying risks and gaps in test coverage, collaborating cross-functionally with developers and Product Owners, and driving quality across the full software development lifecycle. Strong background in automated and manual testing — functional, regression, smoke, integration, UAT, REST API, and cross-browser testing — across web, desktop, and mobile platforms.

TECHNICAL SKILLS

Test Automation	Selenium WebDriver, Selenium Grid, Playwright (TypeScript/Python), Appium, WinAppDriver, FlaUI, REST Assured, Postman, SoapUI
Languages	C#, Java, TypeScript, JavaScript, Python, SQL, VB.NET
Test Frameworks	TestNG, JUnit, NUnit, Playwright Test, Cucumber (BDD), SpecFlow (Gherkin), Page Object Model (POM), Hybrid Frameworks
CI/CD & DevOps	Azure DevOps (ADO), Jenkins, Git, GitHub, Maven, GitHub Actions
Test & Defect Mgmt	Jira, Azure DevOps Test Plans, HP Quality Center, TestRail
API & Database	REST API Testing, REST Assured, Postman, SoapUI, SQL, Oracle, MySQL, JDBC
Methodologies	Agile, Scrum, BDD, TDD, Regression, Smoke, Functional, Integration, UAT, Manual Testing
Tools & Platforms	IntelliJ IDEA, Visual Studio, Eclipse, Android Studio, Docker, AWS EC2, GitHub Copilot, Linux/Unix
Domain Knowledge	Healthcare (MEDITECH Expanse/MAGIC, EHR), Retail Banking, Financial Applications

PROFESSIONAL EXPERIENCE

HCA Healthcare

Nashville, TN

Senior SDET / SDET

July 2023 – Present

- Selenium + C# Automation:** Architected and maintained Selenium WebDriver + C# test automation suites using SpecFlow (BDD/Gherkin), NUnit, and Page Object Model (POM), covering functional, regression, smoke, and end-to-end scenarios for clinical dashboards and financial portals; reduced manual regression effort through comprehensive automated coverage. Authored supplemental Java utility libraries shared across QA teams.
- Framework Engineering:** Engineered hybrid automation frameworks in C# and TypeScript with configuration-driven design (XML/JSON config), centralized logging, screenshot-on-failure, and parallel execution support; defined and maintained test strategies, test plans, and testing estimates aligned with Agile delivery practices — integrated directly into Azure DevOps CI/CD pipelines for continuous test feedback. Evaluated and piloted Playwright (TypeScript) as a next-generation replacement for Selenium on select regression suites.
- Playwright Automation (TypeScript & Python):** Developed and maintained Playwright test suites in TypeScript and Python targeting clinical portal and patient-facing web applications; leveraged Playwright's built-in auto-wait, trace viewer, and parallel execution to achieve faster and more reliable end-to-end coverage than legacy Selenium tests; integrated Playwright Test runner into Azure DevOps pipelines with HTML reporting and screenshot capture on failure.
- Azure DevOps & Jenkins CI/CD:** Configured and maintained CI/CD pipelines in Azure DevOps, Jenkins, and GitHub Actions — scheduling nightly regression runs, publishing HTML test result reports, enforcing automated quality gates on pull requests, and coordinating release testing activities to ensure quality and readiness for production deployments across multiple environments.
- Jira Defect & Test Management:** Logged, triaged, and tracked defects end-to-end in Jira and Azure DevOps Test Plans; proactively identified risks, gaps, and improvements in test coverage; maintained requirement traceability matrices and collaborated cross-functionally with developers, Product Owners, and business stakeholders across Agile/Scrum sprints to drive timely root cause resolution.
- REST API Testing:** Validated REST API endpoints using Postman and REST Assured; designed test suites covering CRUD operations, authentication flows, schema validation, and response time assertions; authored Python scripts for data-driven test payload generation and backend data verification via SQL against Oracle and SQL Server databases.

- **Manual & UAT Testing:** Performed manual functional, integration, and UAT testing for end-to-end patient discharge workflows including provider orders, nursing documentation, medication reconciliation, and billing/charge-capture; produced compliance evidence packages for hospital go-lives.
- **Desktop Automation:** Developed Windows desktop UI automation for clinical and back-office applications using WinAppDriver and FlaUI in C#; automated data entry, form validation, and report generation workflows replacing repetitive manual processes.
- **Leadership & Mentoring:** Conducted peer code reviews, mentored junior SDET engineers on Selenium, Playwright, TypeScript, and Python best practices, and leveraged GitHub Copilot and AI tools to accelerate test script authoring, refactor legacy automation, and streamline QA documentation.

Servus Credit Union

Edmonton, AB, Canada

Automation Test Analyst II

April 2021 – July 2023

- **Selenium + C# Test Suites:** Designed and maintained automated regression suites for web and desktop financial applications using Selenium WebDriver + C#, SpecFlow (BDD/Gherkin), NUnit, and Page Object Model — covering financial transaction flows, account management, and reporting modules. Introduced Playwright (TypeScript) as a pilot for new browser-based test scenarios, validating faster execution and improved reliability vs. legacy Selenium suites.
- **Playwright + TypeScript Automation:** Developed and maintained Playwright test suites in TypeScript targeting online banking portals and customer-facing financial web applications; leveraged Playwright's built-in auto-wait, cross-browser execution (Chromium, Firefox, WebKit), trace viewer, and Playwright Test runner for parallel test execution; authored reusable Page Object Model components and integrated suites into Azure DevOps CI/CD pipelines with HTML reporting and screenshot capture on failure — achieving measurable reduction in regression cycle time.
- **Azure DevOps CI/CD:** Contributed to CI/CD pipeline improvements in Azure DevOps and GitHub Actions — configuring test agents, scheduling nightly regression runs, publishing HTML test result reports, and coordinating release testing to ensure quality and readiness for production deployments.
- **Desktop Automation:** Automated core banking Windows desktop applications using WinAppDriver and FlaUI in C#; created stable, reusable selectors and handled dynamic UI controls in legacy financial interfaces.
- **Jira & Test Management:** Managed test cases, sprint defects, and QA metrics in Jira; defined test strategies, test plans, and testing estimates aligned with Agile delivery; proactively identified risks and gaps in test coverage across functional, regression, and integration scenarios per sprint.
- **SQL Database Validation:** Performed SQL-based backend validation against Oracle and SQL Server for reconciliation checks, test data setup, and teardown during automated and manual testing cycles.
- **Legacy Migration:** Converted manual test cases and legacy UFT/QTP scripts into maintainable C# Selenium assets and Python-based data validation scripts, expanding automated coverage and cutting regression cycle time.
- **Knowledge Transfer:** Cross-trained QA teammates on Selenium + C# frameworks, SpecFlow BDD practices, WinAppDriver desktop testing techniques, and Playwright TypeScript fundamentals.

Selenium Master LLC

Columbia, MD, USA

QA Automation Engineer

July 2017 – April 2021

- **Selenium + Java Frameworks:** Developed, enhanced, executed, and debugged Page Object Model (POM)-based automation frameworks in Java with Selenium WebDriver, TestNG, JUnit, and Cucumber (BDD/Gherkin); designed and maintained test strategies and test plans covering smoke, functional, regression, cross-browser, and end-to-end test suites for web applications.
- **REST API Automation:** Automated REST API validation using REST Assured (Java); designed test suites for CRUD operations, authentication, schema validation, and response time assertions; performed backend verification via JDBC and SQL queries.
- **Jenkins & Maven CI/CD:** Integrated automation suites into Jenkins CI/CD pipelines with Maven and GitHub Actions; developed, enhanced, executed, and debugged data-driven, cross-browser, and parallel tests via Selenium Grid and TestNG parallel suites — improving release feedback cycle speed and ensuring quality readiness for production deployments.
- **Mobile Test Automation:** Developed mobile automation scripts for Android and iOS using Appium + Java; built reusable mobile Page Objects and integrated suites into Jenkins CI pipelines.
- **Jira & Test Documentation:** Logged and tracked defects in Jira and HP Quality Center; maintained test plans, traceability matrices, and QA metrics across multiple concurrent Agile sprint releases.
- **Manual Testing:** Executed manual functional, regression, and integration test cases in Agile/Scrum environments; participated in sprint ceremonies — backlog grooming, sprint planning, standups, and retrospectives.

EDUCATION

Master of Science

University of Camerino, Italy

Bachelor of Science

Xinjiang Normal University, China
